# WebProgression™

Creative excellence is important in web development. However, long before Progression starts the creative process, we involve the customer, the site user and the business in an extensive research process.

This builds a foundation for the site focused on the goals of the user, consistent with the culture and values of the business and orientated towards achieving the goals of the internet, intranet or extranet site.

Progression has a simple, but very focussed, approach to developing websites.

Using our copyrighted process 'WebProgression™' we develop the website to meet the business needs of our customers.
